

## ETS® Proficiency Profile

### Summary of Scaled Scores

**To show the ability of the group taking the test**

**Nicholls State University**

**Abbreviated**

**Test Description:** Abbreviated Form B Paper

**Number of students tested:** 475

**Number of students included in these statistics:** 455

**Number of students excluded (see roster):** 20

**Cohort Name:** TEST DATE: 2013-12-13T00:00:00-05:00

**Close Date:** 01/06/2014

**Student Level:** All

	Possible Range	Mean Score	95% Confidence Limits* for Mean	Standard Deviation	25th Percentile	50th Percentile	75th Percentile
<b>Total Score</b>	400 to 500	443.52	442 to 445	17.12	430	442	453
<b>Skills Subscores:</b>							
<b>Critical Thinking</b>	100 to 130	110.65	110 to 112	5.65	106	110	115
<b>Reading</b>	100 to 130	117.41	116 to 118	6.85	112	118	123
<b>Writing</b>	100 to 130	114.81	114 to 116	4.68	112	115	119
<b>Mathematics</b>	100 to 130	113.32	112 to 114	5.31	110	113	116
<b>Context-Based Subscores:</b>							
<b>Humanities</b>	100 to 130	113.46	112 to 114	6.29	107	112	119
<b>Social Sciences</b>	100 to 130	112.16	111 to 113	5.84	106	113	118
<b>Natural Sciences</b>	100 to 130	115.10	114 to 116	5.58	110	116	119

\*The confidence limits are based on the assumption that the questions contributing to each scaled score are a sample from a much larger set of possible questions that could have been used to measure those same skills. If the group of students taking the test is a sample from some larger population of students eligible to be tested, the confidence limits include both sampling of students and sampling of questions as factors that could cause the mean score to vary. The

confidence limits indicate the precision of the mean score of the students actually tested, as an estimate of the "true population mean" - the mean score that would result if all the students in the population could somehow be tested with all possible questions. These confidence limits were computed by a procedure that has a 95 percent probability of producing upper and lower limits that will surround the true population mean. The population size used in the calculation of the confidence limits for the mean scores in this report is 455.

Reports based on a sample of fewer than 50 test takers are representative of the performance of **that sample only**. Reports based on **fewer than 50 test takers** should not be considered representative of the larger group of like students, and inferences or generalizations about the larger population or subgroup **should not** be made based on such small samples.
