

BCSSE 2023 - NSSE 2024 Combined Report

School Name	UNITID
Nicholls State University	159966

The BCSSE 2023-NSSE 2024 Combined Report summarizes the detailed information contained in your BCSSE and NSSE administrations, including survey details, cross-sectional results, longitudinal results, and participating institutions. This report is also available in your BCSSE Dashboard account. In the dashboard, you can view your institutional results and also create summary results by institutional characteristics for all other participating BCSSE-NSSE schools. Contact your BCSSE Campus Project Manager or email bcsse@iu.edu for more information.

Report Sections

Cross-Sectional Results (pages 3 - 10)

The cross-sectional results present item-by-item student responses and mean comparisons from your BCSSE and NSSE administrations. All respondents are included *whether they completed one or both surveys*, providing the best estimates of your students' precollege experiences and their engagement during the first year. With cross-sectional results displayed side-by-side, you can identify areas of correspondence and gaps in engagement for better understanding of the first-year student experience.

The cross-sectional results include the following sections:

1. Student expected major and first-year major, as well as student high school, expected, and actual first-year grades (all student-reported)
2. Item frequencies and means for BCSSE Scales and NSSE Engagement Indicators
3. Item frequencies and means for how students spend their time in a typical week

Longitudinal Results (pages 11 - 17)

The longitudinal results compare BCSSE and NSSE data only *for students who completed both surveys*. Means for BCSSE Scales and NSSE Engagement Indicators are grouped by expectations for grades, expectations for studying, and whether the expectations were met.

The longitudinal results include the following sections:

4. Student expected major and first-year major, as well as student high school, expected, and actual first-year grades (all student-reported)
5. BCSSE Scale and NSSE Engagement Indicator gaps
6. Gaps for how students expected to spend their time and how they actually did so in a typical week

Participating Institutions (page 18)

A complete list of institutions that participated in both BCSSE 2023 and NSSE 2024. In your BCSSE Dashboard account, summary results by institutional characteristics for all other participating BCSSE-NSSE schools are available. Contact your BCSSE Campus Project Manager or email bcsse@iu.edu for more information.

BCSSE Scales and NSSE Engagement Indicators

Five BCSSE Scales and their corresponding NSSE Engagement Indicators are included in the cross-sectional and longitudinal sections, providing valuable information about distinct aspects of student engagement. These include Quantitative Reasoning, Learning Strategies, Student-Faculty Interaction, Collaborative Learning, and Discussions with Diverse Others.

Each BCSSE Scale is a combination of three to four items and is constructed using the same approach as the NSSE Engagement Indicators. Each scale is scored on a range from 0 to 60. First, component items are converted to a 60-point scale (e.g., never=0, sometimes=20, often=40, and very often=60), and then averaged to create student-level scores. An institution's score is the average of the students' scores. Student-level scores for both the BCSSE Scales and NSSE indicators are included in your BCSSE-NSSE combined data file.

For more information about BCSSE, visit bcsse.iu.edu.

For more information about the Engagement Indicators, see your [NSSE Engagement Indicators](#) report.

The cross-sectional results include all respondents from BCSSE and NSSE, *whether they completed one or both surveys*. Your entering first-year students completed BCSSE last summer or shortly after fall classes started, and they completed NSSE this past winter or spring. The counts in the bottom row of each table below reflect all the data available from first-year student respondents. High school, expected, and actual first-year grades, as well as expected and first-year major are all self-reported. See your the Respondent Profile in your NSSE Institutional Report and Demographic and Background Characteristics in your BCSSE dashboard reports for more details regarding the student backgrounds and profile.

The cross-sectional results include the following sections:

1. Student expected major and first-year major, as well as student high school, expected, and actual first-year grades
2. Student time use: Expectations and experiences
3. Item frequencies and means for BCSSE Scales and NSSE Engagement Indicators (unweighted)

1. Student Major and Grades

Major

Metrics	Expected first-year (BCSSE)	Actual first-year (NSSE)
Arts & Humanities	7%	6%

BCSSE 2023 - NSSE 2024 Combined Report

Longitudinal Results

The longitudinal results compare BCSSE and NSSE data only *for students who completed both surveys*. Means for BCSSE Scales and NSSE Engagement Indicators are grouped by expectations for grades, expectations for studying, and whether the expectations were met. High school, expected, and actual first-year grades, as well as expected and first-year major are all self-reported. The student backgrounds and profile can be further investigated using your BCSSE-NSSE longitudinal data file.

The longitudinal results include the following sections:

1. Student expected major and first-year major, as well as student high school, expected, and actual first-year grades
2. BCSSE and NSSE Engagement Indicator means and group frequencies
3. BCSSE Scale and NSSE Engagement Indicator gaps
4. Gaps for how students expected to spend their time and how they actually did so in a typical week

1. Student Majors and Grades

Major

Metrics	Expected first-year (BCSSE)	Actual first-year (NSSE)

2. Interpreting BCSSE Scale and NSSE Engagement Indicators

The sample results below are a guide to interpret the results on page 13.

1. Scale and Engagement Indicators: This table reports your longitudinal results for BCSSE Scales and NSSE Engagement Indicators (EI).

2. BCSSE Scales and NSSE Engagement Indicator Means: The counts, means, and standard deviations for each scale and engagement indicator. Scores for both the BCSSE Scales and NSSE Engagement Indicators range from 0 to 60, with increasing values indicating increasing expected engagement (BCSSE) and actual engagement (NSSE).

2. BCSSE Scale and NSSE Engagement Indicators Groupings: BCSSE and NSSE respondents are assigned to one of four groups (0-15, 16-30, etc.) based on their BCSSE Scale and NSSE Engagement Indicator scores.

Interpreting BCSSE Scale and NSSE Engagement Indicator Gaps

The sample results below are a guide to interpret the results on page 15.

1. BCSSE Scale Groupings: BCSSE respondents are assigned to one of four groups (0-15, 16-30, etc.) based on their BCSSE Scale scores. BCSSE Scales are scored from 0 to 60, with increasing values indicating increasing engagement.

3. NSSE Engagement Indicator Means: The columns display the NSSE EI mean for each BCSSE group. The graph reveals potential gaps between BCSSE Scale scores and NSSE EI scores. For instance, in the sample below, entering first-year students with high school Quantitative Reasoning scores between 46-60 averaged 26.7 on NSSE months later, below the overall mean.

4. Overall NSSE Engagement Indicator Mean: The horizontal line represents the mean EI score for all longitudinal respondents from your institution.

Interpreting Student Time Use: Expectations and Experiences

The sample results below are a guide to interpret the results on page 17.

1. Student Time Use Activity: These graphs include the items that indicate how students expected to and spent their time in a typical week. The counts for each group (0-5, 6-10, etc.) can be found in the BCSSE Dashboard, the online version of these reports.

2. BCSSE Expected Hours Groupings: BCSSE respondents are organized into one of four groups (0-5, 6-10, etc.) based on their expected hours per week in the activity.

3. High School and First-Year Mean Hours per Week: The columns display the high school (BCSSE) and first-year (NSSE) mean for hours week in each activity. The graph reveals potential gaps between high school and first-year means with expected hours per week. For instance, in the sample below, entering first-year students who expected to study 16 or more hours per week during their first year studied an average of 12.8 hours per week in high school, well above the overall high school average (green line). These students also studied an average of 16.8 hours per week during the first year, higher than the overall first-year average (blue line). Students in this group on average met their expectation of studying 16 or more hours per week.

4. Overall High School and First-Year Mean: The horizontal green line represents the mean hours per week studying in high school and the blue line represents the mean hours per week studying during their first year for your respondents.

3. Student Time Use: Expectations and Experiences

Hours studying per week

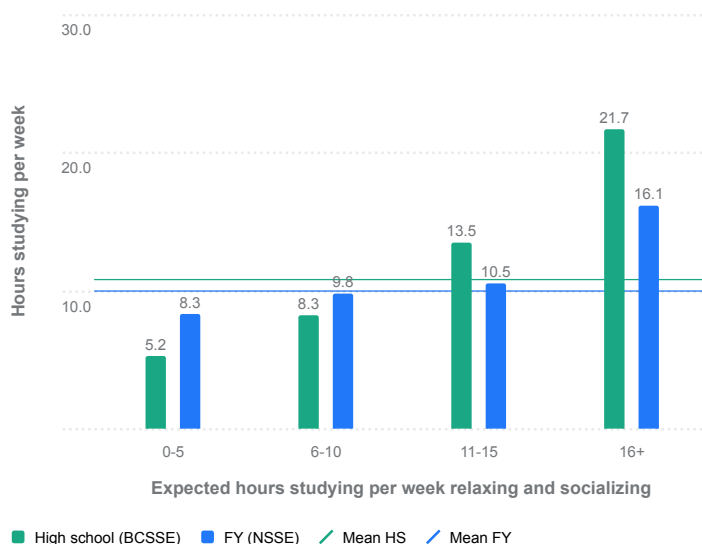

Hours working per week

Hours in co-curricular activities per week

Hours relaxing/socializing per week
