

## **Internship Writing Projects Oceaneering ROV Training Center**

The length of each project will vary as needed. The student may be working on multiple projects at one time.

### **1. Atlas Hybrid Course Instructor Guide & LMS Module**

The ROV Training Center currently teaches a course for ROV Technicians on the use and maintenance of the Atlas Hybrid manipulator. Manipulators are the “arm” that ROV work-class vehicles are equipped with to perform job tasks. One of our current projects is writing and designing the instructor guide for this course. In addition, we will be writing and designing a module to use online on Oceaneering’s LMS (Learning Management System). The SME (subject matter expert) for this project is Ian Francis. The lead on the project is Summer Davis.

### **2. Re-write Various LMS Modules**

The ROV Training Center is in the process of re-writing and designing numerous training modules for online learning. The modules are out of date and need technical and grammatical writing improvements.

### **3. Riggers Training Course Instructor Guide**

The ROV Training Center will be teaching a course in rigging. One of our current projects is writing and designing the instructor guide for this course, including other instructional materials for the course. The SME for this project is Kenny Nichols. The lead on this project is Crystal Daigle.
